| Half Term 1 (8 weeks) - Year 11 | | | |
|---------------------------------|--|--|--|
| Week / Date | Homework task 1 Cornell Notes | Homework task 2 Exam Question | |
| Week 1 1st September 2025 | Cornell Notes on: Components of Fitness | Question : Identify two skill components of fitness that are required for a basketballer and explain how they benefit their performance in a match. (4) | |
| Week 2 8th September 2025 | Revision Cards on: Components of Fitness | Question: Identify two physical components of fitness that are required for a midfielder in football or a centre in netball and explain how they benefit their performance in a match. (4) | |
| Week 3 15th September 2025 | Cornell Notes on: Importance of fitness | Question: Identify and explain how an athlete might use each part of FITT to improve their running time. (4) | |
| Week 4 22nd September 2025 | Revision Cards on: Principles of Training | Question : Identify a component of fitness that a marathon runner would require, and compare this to a component of fitness a 100m sprinter would require. (4) | |
| Week 5 29th September 2025 | Cornell Notes on: Exercise Intensity | Question : Identify and explain the four pre-test procedures required to complete before a fitness test. (8) | |
| Week 6 6th October 2025 | Revision Cards on: Exercise Intensity | Question : Jodie is 28 years old. Work out her maximum heart rate, then her upper and lower training thresholds. Show your workings out. (4) | |
| Week 7 13th October 2025 | Cornell Notes on: Importance of Fitness Testing | Question: Describe how a coach or a participant could use fitness testing to improve their performance. (6) | |
| Week 8 20th October 2025 | Revision Cards on: Importance of Fitness Testing | Question: Identify two physical components of fitness that are required for a midfielder in football or a centre in netball and explain how they benefit their performance in a match. (6) | |

| Half Term 2 (7 weeks) - Year 11 | | | |
|---------------------------------|--|--|--|
| Week / Date | Homework task 1 Cornell Notes | Homework task 2 Exam Question | |
| Week 9 3rd November 2025 | Cornell Notes on: Fitness Testing Equipment | Question: Table tennis requires quick reactions for their games. Identify what reaction time fitness tests would be beneficial and the equipment required. (6) | |
| Week 10 10th November 2025 | Revision Cards on: Physical fitness Tests | Question : Gymnasts require a wide range of movement for their events. Identify what flexibility fitness tests would be beneficial and the equipment required. (6) | |
| Week 11 17th November 2025 | Cornell Notes on: Fitness training methods for physical components of fitness | Question: Boxers require muscular endurance to complete their event, identify and explain how they could complete circuitraining to benefit their event. (6) | |
| Week 12 24th November 2025 | Mock Exams | Mock Exams | |
| Week 13 1st December 2025 | Mock Exams | Mock Exams | |
| Week 14 8th December 2025 | Cornell Notes on: Fitness training methods for skill-related components of fitness | Question : Long jumpers require power to complete their event, identify and explain how they could complete plyometric training to benefit their event. (6) | |
| Week 15 15th December 2025 | Revision Cards on: Skill related fitness Tests | Question : Triathletes require high levels of aerobic endurance to be successful. Identify 3 aerobic endurance fitness tests that would be beneficial and the equipment required. (6) | |

| Week 1&2 - Components of Physical Fitness | Week 1&2 - Components of Skill Related Fitness |
|---|--|
| Muscular Endurance: the ability of the muscular system to continue to contract at a light to moderate intensity to allow repetitive movements throughout a long event or game. Aerobic Endurance: the ability of the cardiorespiratory system to supply oxygen and nutrients to the muscles to sustain low to medium intensity work to delay fatigue. | Skill related: Coordination: The smooth flow of movement needed to perform a motor task efficiently (wasting as little energy as possible) and accurately (without going wrong). Agility:the time taken between a stimulus and the start of a response, useful in fast-paced sports to make quick decisions about what to do. |
| Muscular Strength: the maximum force that can be generated by a muscle or muscle group to improve forceful movements within an activity. | Reaction time: The time that it takes for a sports performer to respond to a stimulus and initiate (start) their response. |
| Speed: distance divided by time to reduce time taken to move the body or a body part in an event or game. There are three types of speed: Accelerative speed – sprints up to 30 m Pure speed- sprints up to 60 m Speed endurance- sprints with a short recovery period (rest) in between. | Balance: the ability to maintain centre of mass over a base of support, useful to maintain positions in performance sports (static balance) or when on the move in any other sporting situation (dynamic balance). |
| Body Composition: the relative ratio of fat mass to fat-free mass in the body allowing variation in body composition dependent on the sport. | Power: the product of speed and strength to allow for explosive movements in sport. |
| Flexibility:the range of motion possible at a joint to allow improvements in technique. | |

| Week 3&4 - The importance of |
|--------------------------------------|
| fitness for successful participation |
| in sport |

Week 3&4 - Principles of Training

Types of sports requiring specific components of fitness:

- Aerobic endurance events/sports lasting more 30 minutes
- Muscular endurance events/sports lasting more 30 minutes
- Muscular strength activities requiring force, e.g. throwing events
- Speed activities requiring fast movement, e.g. sprinting
- Flexibility activities requiring a wide range of movement around a joint, e.g. gymnastics, martial arts
- Body composition low body fat, e.g. gymnastics, high muscle mass, e.g. sprinters
- Power activities requiring explosive movement e.g. gymnastics, basketball
- Agility activities requiring quick changes of direction, e.g. dodging the opposition in a team game, freestyle skiing
- Reaction time any activity where a quick decision or response to a stimulus is needed
- Balance an activity requiring the control of the distribution of weight or to remain upright and steady
- Coordination any activity requiring the movement of two or more body parts and can include the use of sporting

The basic principles of training (FITT):

- Frequency: the number of training sessions completed over a period of time, usually per week
- Intensity: how hard an individual will train
- Time: how long an individual will train for
- Type: how an individual will train by selecting a training method to improve a specific component of fitness.

Additional principles of training (SPORVAIR):

- Specificity definition: training should meet the needs of the sport, or physical/skill-related fitness goals to be developed
- Progressive overload definition: in order to progress, training needs to be demanding enough to cause the body to adapt, improving performance
- Reversibility definition: if training stops, or the intensity of training is lowered, fitness gains from training are lost
- Variation definition: altering types of training to avoid boredom and maintain motivation to train
- Adaptation definition: changes to the body due to increased training loads
- Individual differences/needs definition: training should meet the needs of an individual
- Rest and recovery definition: to allow the body to recover and adapt.

Week 5&6 - Exercise Intensity

Week 7&8 - Importance of fitness testing and requirements for administration of each fitness test

Heart rate: The number of times the heart beats per minute (bpm)

Maximum heart rate – also called HR max

Equation: HR max = 220 – age (years)

e.g. the maximum heart rate of a 25 year old is 195 bpm

Heart rate training zones:

Aerobic training zone - 50%-80% of HR max Anaerobic training zone - 80-90% of HR max

Working out target zones:

- 1. Calculate maximum heart rate (HR max) HR max = 220 age (years)
- 2. Find upper training threshold = HR max X 0.8
- 3. Find lower training threshold = HR max X 0.5

e.g. 220 - 25 (age) = 195 bpm

 $195 \times 0.8 = 156$ bpm (upper training threshold)

 $195 \times 0.60 = 97.5 \text{ bpm (lower training threshold)}$

Target zone = 97.5 bpm - 156 bpm

The RPE BORG Scale

The numbers on the scale represent the different levels of exercise intensity. Level 6 - level 20

The BORG can be used to estimate a person's heart rate HR (bpm) = RPE x 10

e.g. a perform says they are working extremely hard and give a RPE scale rating of 19 their estimated heart rate is: HR (bpm) = RPE X 10

You can also estimate a RPE scale/Borg scale rating from a heart rate (bpm):

RPE scale = HR (bpm) ÷10.

*RPE - rating of perceived exertion

Free weight training reps and load

- Muscular endurance low load / high rep 50-60% 1RM / 20 reps
- Maximal strength high load / low rep 90% 1RM 6 reps

Reasons for fitness testing:

- gives baseline data for monitoring/improving performance
- can design training programmes based on test results
- determine if training programmes are working
- results can give a performer something to aim for
- provide goal setting aims.

Pre-test procedures:

- calibration of equipment
- complete informed consent
- complete Physical Activity Readiness Questionnaire (PAR-Q)
- participant pre fitness test check e.g. prior exercise participation.

Reliability of test:

- consistency of results
- factors affecting reliability:
 - calibration of equipment
 - o motivation of the participant
 - \circ conditions of the testing environment (inside versus outside conditions)
 - o experience of the person administering the test
 - compliance with standardised test procedure.

Validity of results - this is affected by the administration and accuracy of the test by the testers.

Practicality:

- COS
- time taken to perform the test
- time taken to set up the test
- time taken to analyse data
- number of participants that can take part in the test at any time.

| Week 9-11 - Fitness test methods for components of physical fitness | Week 9-11 - Fitness test methods for components of skill-related fitness |
|---|--|
| Aerobic endurance: Multi-stage fitness test, also known as the bleep test (20 metre distance) Equipment - Tape measure, MSFT recording or app, speakers/CD player, cones. Yo-Yo test Equipment - Tape measure, MSFT recording or app, speakers/CD player, cones. Harvard step test Equipment - metronome, stopwatch, ruler/tape measure, bench. 12-minute Cooper run or swim. Equipment - stopwatch, whistle, cones, tape measure. Muscular endurance: One-minute press-up One-minute sit-up Timed plank test Equipment - stopwatch and a mat Flexibility: Sit and reach test Equipment - Sit and reach box, ruler or tape measure, mat Calf muscle flexibility test Equipment - Mat, wall Shoulder flexibility test. Equipment - 2m rope, tape measure Speed: 30 metre sprint test 30 metre sprint test 30 metre flying sprint. Equipment - Cones, tape measure, stopwatch Muscular strength: Grip dynamometer Equipment - handgrip dynamometer Equipment - fixed or free weights Body composition: Body Mass Index (BMI) Equipment - scales, tape measure/stadiometer, calculator Bioelectrical Impedance Analysis (BIA) - Equipment - BlA machine Waist to hip ratio. Equipment - tape measure | Agility: Illinois agility run test Equipment - Tape measure, cones, stopwatch T Test Equipment - Tape measure, cones, stopwatch Balance: Stork stand test Equipment - Stopwatch, mat Y balance test Tape measure/ruler, stopwatch, mat Coordination: Alternate-Hand Wall-Toss test Tennis ball, stopwatch, tape measure, wall Stick flip coordination test 60cm long stick, 2cm in diameter with tape or paint at one end. Power: Vertical jump test Vertical jump test Tape measure Margaria-Kalamen power test Tape measure Margaria-Kalamen power test Tape measure, scales, cone, stairs, stopwatch Reaction time: Ruler drop test Metre ruler Online reaction time test (reaction test timer) App, smartphone/tablet |

Week 14 - Fitness training methods for physical components of fitness

Aerobic endurance:

- Continuous training steady pace and moderate intensity for a minimum period of 30 minutes
- Fartlek training the intensity of training is varied by running at different speeds and/or over different terrain
- Interval training work period followed by a rest or recovery period
 - for aerobic endurance decrease the number/length of rest periods and decrease work intensity (compared to speed training)
- Circuit training use of a number of stations/exercises completed in succession with minimal rest periods in between to develop aerobic endurance.

Flexibility:

- Static active the performer applies internal force to stretch and lengthen the muscle
- Static passive requires the help of another person or an object, e.g. wall to apply external force causing the muscle to stretch
- Proprioceptive Neuromuscular Facilitation (PNF) technique the technique involves the use of a partner or immovable object, isometric muscle contractions to inhibit the stretch reflex.

Muscular endurance:

- Free weights and fixed resistance machines high repetitions and low loads
- Circuit training using body resistance exercises or weights with low loads and high repetitions.

Muscular strength training:

• Free weights and fixed resistance machines – high loads and low repetitions.

Speed:

- Acceleration sprints pace is gradually increased from a standing or rolling start to jogging, then to striding, and then to a maximal sprint
- Interval training work period followed by a rest or recovery period.
 - For speed short, high intensity work periods, increasing the number of rest periods and increasing work intensity (compared to aerobic endurance training)
- Resistance drills hill runs, parachutes, sleds, bungee ropes, resistance bands.

Week 15 - Fitness training methods for skill-related components of fitness

Agility:

 Speed Agility and Quickness training (SAQ) – drills used to develop physical ability and motor skills.

SAQ training is a mixture of dynamic movements that aim to increase a performer's speed and agility, To train agility, you need to take part in sport-specific training which includes speed, agility and quickness (SAQ) training principles. Generally involves you sprinting and then changing direction over a set course. This could be dribbling the ball while sprinting around cones set up on the pitch or having teammates act as opponents and dribbling at speed around them while keeping control of the ball and keeping the ball away from them.

Power:

- Plyometrics lunging, bounding, incline press-ups, barrier hopping and jumping.
- Eccentric muscle contraction is where the muscle lengthens when it contracts.
- Concentric muscle contraction is where the muscle shortens when it contracts.

Think of your muscle as an elastic band - the elastic band will fire further if you stretch it further back before letting it go. Plyometric training takes the muscle through an eccentric muscle action that lengthens and stretches the muscle before a powerful concentric muscle action. The shorter the time between the stretching phase and shortening, the more power can be generated. Plyometric training is any exercise that enables a muscle to reach maximum force in the fastest possible time. Over time, this makes the body create a faster rate of contraction, which will improve power.

Balance:

 Use of specific training exercises that require balancing on a reduced size base of support.

Coordination:

• Use of specific training exercises using two or more body parts together.

Reaction time:

• Use of specific training exercises to practise quick responses to an external stimulus.

| STEP 2: | | |
|--------------------------------------|--|--|
| CREATE | | |
| | | |
| CUES | ATER 4 DECARD VOLEN | |
| | STEP 1: RECORD YOUR NOTES | |
| What: Reduce your | | |
| notes to just the | What: Record all keywords, ideas, important dates, people, places, | |
| essentials. | diagrams | |
| What: Immediately | and formulas from the lesson. Create a new page for each topic discussed. | |
| after class, | When: During class lecture, discussion, or reading session. | |
| discussion, or | | |
| reading session. | How: | |
| How: | Use bullet points, abbreviated phrases, and pictures Avoid full sentences and paragraphs | |
| Jot down key ideas important | Leave space between points to add more information later | |
| ideas, important words and | | |
| phrases | Why: Important ideas must be recorded in a way that is meaningful to you. | |
| Create questions | | |
| that might | | |
| appear on an exam | | |
| Reducing your | | |
| notes to the | | |
| most important | | |
| ideas and concepts | | |
| improves recall. | | |
| Creating | | |
| questions that | | |
| may appear on | | |

| about how the | | |
| information | | |
| might be applied | | |
| and improves your | | |
| performance on | | |
| the exam. | | |
| Why: Spend at | | |
| least ten minutes | | |
| every week | | |
| reviewing all of your previous | | |
| notes. Reflect on | | |
| the material and | | |
| ask yourself | | |
| questions based | | |
| on what you've recorded in the | | |
| Cue area. Cover | | |
| the note-taking | | |
| area with a piece | | |
| of paper. Can you answer them? | | |
| answer uteill: | | |
| | | |

STEP 3: SUMMARISE & REVIEW

What: Summarise the main ideas from the lesson.
What: At the end of the class lecture, discussion, or reading session.
How: In complete sentences, write down the conclusions that can be made from the information in your notes.

Why: Summarising the information after it's learned improves long-term retention.
