

**Exam Board:** Edexcel

**Subject:** Statistics

**Papers:** 2 Calculator papers

**Marks available:** 80 per paper

**Length of paper:** 1 hour 30 mins

**Topics:** Statistics

**Exam Information, guidance and hints**

**Command words:** A range of command words are used within the GCSE paper. Here are a few to help you get your revision started.

<b>Explain:</b> Write a sentence or mathematical statement to show how you got to your answer or researched your conclusion	<b>Show:</b> All workings needed to get to a given answer <b>or</b> complete a diagram to show given information.	<b>Draw:</b> Produce an accurate drawing (unless a sketch is being drawn).	<b>Sketch:</b> Produce a drawing that does not have to be drawn to scale or a graph that is drawn without working out each coordinate.	<b>Find:</b> Some workings will be needed to get to the final answer.
<b>Expand:</b> Remove brackets.	<b>Expand and simplify:</b> Remove brackets and then collect like terms.	<b>Describe:</b> Write a sentence that gives the features of the situation.	<b>Complete:</b> Fill in missing values.	<b>Justify:</b> Show all workings and/or give a written explanation.
<b>Solve:</b> Find the solution of an equation or inequality.	<b>Solve algebraically:</b> Find the solution of an equation or inequality; algebraic manipulation must be shown.	<b>Simply:</b> Make something smaller/shorter.	<b>Simplify fully:</b> Make something smaller/shorter (the answer must be in simplest form).	<b>Factorise:</b> Insert brackets by taking out a common factor.
<b>Factorise fully:</b> Insert brackets by taking out the highest common factor.	<b>Express:</b> Re-write in another form, some workings may be needed.	<b>Work out:</b> Some workings will be needed to get to the answer.	<b>Change:</b> Convert from one unit to another; either using known metric unit	<b>Give a reason:</b> Must be clear and accurate. If the reasons are geometrical

			conversion or the use of a conversion graph.	make sure you a) provide a reason for each stage of your working and b) use correct geometric terminology.
<b>Write down:</b> No workings are needed.	<b>Write:</b> no working is needed for a 1 mark question (this may not be the case for questions worth more than one mark).	<b>Calculate:</b> A calculator and some workings will be needed.	<b>Prove:</b> More formal than 'show', all steps must be present. In the case of a geometrical proof, reasons must be given.	<b>Prove algebraically:</b> Use algebraic notation throughout the proof.

**Videos and markschemes:**

**Maths Genie**

Maths Genie has lots of resources for Statistics (exam paper and exam style questions) whilst also offering video solutions, recap videos, mark schemes and model solutions. A great place to support your Statistics knowledge.

**Website** - <https://www.mathsgenie.co.uk/>

**Keywords**

We have populated online flashcards for all the keywords and concepts needed for both tiers on statistics.

**Website** - <https://quizlet.com/ie/40544564/gcse-statistics-keywords-flash-cards/>

**Physics and Maths Tutor**

Another online platform offering revision worksheets, notes, exam papers and markschemes.

**Website** - <https://www.physicsandmathstutor.com/maths-revision/gcse-statistics/>

**Hints/tips:**

- Show your workings - Every method mark counts!
- The paper is 80 marks, not just 25 or more questions - so try every question.
- 80 marks in 90 minutes - Aim for a minute a mark and it will leave you with 10 minutes to check your work.
- CHECK IT! Make sure you have read the question and check your response multiple times before the end of the exam.

- Don't scribble out your workings - a neat line through will allow the answer to see your method regardless if it is right or wrong.
- Make sure you attempt each question, if you can't complete the question fully, can you try and start the question (this often gets you part marks!).
- Your exam is an excuse to show off your maths, so take the opportunity and show the examiner what we see in lessons every day.

<b>Collection of data</b>		<b>How well do you understand this topic? RAG</b>		
		<b>Red</b>	<b>Amber</b>	<b>Green</b>
<b>Foundation and higher</b>	<ul style="list-style-type: none"> <li>- Correct terminology of different types of data and the differences between them</li> <li>- How to group rounded and unrounded data into class intervals/categories. Including the advantages and disadvantages of doing so.</li> <li>- Understand population, sample and sampling frame (and identify these for given data sets).</li> <li>- Know and describe different methods of random and non-random sampling. Including the advantages and disadvantages.</li> <li>- Select a sample stratified by one category.</li> <li>- The key features of interviews and questionnaires (including the planning aspect).</li> <li>- Write and identify suitable questions for investigations.</li> <li>- Hypothesis writing and how to collect data suitable for hypotheses.</li> <li>- Design data collection sheets and collect the data.</li> </ul>			

	<ul style="list-style-type: none"> <li>- Pilot surveys (know the advantages).</li> <li>- Know constraints of an investigation and how to deal with non responses.</li> <li>- Know potential problems with collected data and how to deal with them.</li> <li>- Know how and why to clean data.</li> </ul>			
<b>Just Higher</b>	<ul style="list-style-type: none"> <li>- Petersen capture-recapture to estimate the size of populations (and know the assumptions made when using this method).</li> <li>- Stratified sampling by more than one category.</li> <li>- Use the random response method for sensitive questions.</li> <li>- Understand and know when to use control groups and matched pairs.</li> </ul>			
<b>Processing and representing data</b>		<b>How well do you understand this topic? RAG</b>		
		<b>Red</b>	<b>Amber</b>	<b>Green</b>
<b>Foundation and higher</b>	<ul style="list-style-type: none"> <li>- Select appropriate representations to use.</li> <li>- Decide whether to group data into class intervals.</li> <li>- Recognise well-presented and poorly presented data.</li> <li>- Construct, draw, use and understand:               <ul style="list-style-type: none"> <li>● Two-way tables</li> <li>● Pictograms</li> <li>● Vertical line graphs</li> <li>● Pie Charts</li> <li>● Choropleth graphs</li> <li>● Histograms</li> <li>● Tally charts</li> <li>● Bar charts</li> <li>● Stem and leaf diagrams</li> <li>● Population pyramids</li> </ul> </li> </ul>			

	<ul style="list-style-type: none"> <li>• Cumulative frequency graphs</li> <li>• Frequency polygons</li> </ul>			
<b>Just Higher</b>	<ul style="list-style-type: none"> <li>- Construct, draw, use and understand:             <ul style="list-style-type: none"> <li>• Comparative pie charts</li> <li>• Histograms with unequal class widths</li> </ul> </li> </ul>			
<b>Summarising data</b>		<b>How well do you understand this topic? RAG</b>		
		<b>Red</b>	<b>Amber</b>	<b>Green</b>
<b>Foundation and higher</b>	<ul style="list-style-type: none"> <li>- Calculate:             <ul style="list-style-type: none"> <li>• Mean, mode, median (including by interpolation) and range from a list or discrete/continuous data in a table.</li> <li>• The minimum, lower quartile, median, upper quartile and maximum value of a list of numbers.</li> <li>• The interquartile range (IQR) and the percentiles for a set of data.</li> </ul> </li> <li>- Understand the advantages and disadvantages of each of the three measurements of central tendency, and which is appropriate to use in different situations.</li> <li>- Understand the effect of transformations on the mean, mode and median.</li> <li>- Construct, use and interpret box plots from summary statistics and cumulative frequency graphs.</li> <li>- Identify and interpret outliers by inspection and show them on box plots.</li> <li>- Use box plots as a method to compare sets of data for dispersion, measure of central tendency and skewness.</li> <li>- Given the median and the interquartile range, make comparisons between different data samples to compare the sample and the population data.</li> </ul>			

	- Identify simple properties of the shape of distributions of data including symmetry, positive and negative skew.			
<b>Just Higher</b>	N/A			
<b>Scatter diagrams and correlation</b>		<b>How well do you understand this topic? RAG</b>		
		<b>Red</b>	<b>Amber</b>	<b>Green</b>
<b>Foundation and higher</b>	<ul style="list-style-type: none"> <li>- Draw a scatter diagram</li> <li>- Describe and make comparisons of correlation               <ul style="list-style-type: none"> <li>• Positive, negative or zero</li> <li>• Strong or weak</li> </ul> </li> <li>- Understand what is meant by a causal relationship and that correlation doesn't imply causation.</li> <li>- Draw a line of best fit by eye and by drawing through a mean point.</li> <li>- Use a line of best fit to make predictions within and outside the data range.</li> <li>- Understand and comment on the reliability of values found through interpolation and extrapolation.</li> <li>- Interpret Spearman's rank correlation coefficient.</li> </ul>			
<b>Just Higher</b>	<ul style="list-style-type: none"> <li>- Find the equation of a line of best fit.</li> <li>- Draw a regression line on a scatter diagram, given the equation.</li> <li>- Interpret the value of the gradient of a regression line.</li> <li>- Calculator spearman's rank correlation coefficient.</li> <li>- Interpret PErason's product moment correlation coefficient.</li> <li>- Understand the distinction between Spearman's rank correlation coefficient and Pearson's product moment correlation coefficient.</li> </ul>			

<b>Time series</b>		<b>How well do you understand this topic? RAG</b>		
		<b>Red</b>	<b>Amber</b>	<b>Green</b>
<b>Foundation and higher</b>	<ul style="list-style-type: none"> <li>- Draw and interpret line graphs and time series.</li> <li>- Draw trend lines on time series graphs and use inspection to identify trends.</li> <li>- Know that a trend line shows the general trend of data.</li> <li>- Interpret rising, falling and level trends on a time series graph.</li> <li>- Identify seasonal variation on a time series graph.</li> <li>- Calculate a four-point moving average.</li> <li>- Draw a trend line through moving averages by eye.</li> </ul>			
<b>Just Higher</b>	<ul style="list-style-type: none"> <li>- Calculate the estimated mean seasonal variation.</li> <li>Know that the predicted value = trend line + seasonal variation.</li> </ul>			
<b>Probability</b>		<b>How well do you understand this topic? RAG</b>		
		<b>Red</b>	<b>Amber</b>	<b>Green</b>
<b>Foundation and higher</b>	<ul style="list-style-type: none"> <li>- Understand the meaning of the words impossible, certain, very likely, likely, unlikely, possible and even.</li> <li>- Use fractions, decimals and percentages to represent probability.</li> <li>- Use probability values to calculate expected frequencies and compare them with actual frequencies.</li> <li>- Use probability to assess risk.</li> <li>- Use sample space diagrams, venn diagrams and tree diagrams to represent all the different outcomes possible</li> </ul>			

	<ul style="list-style-type: none"> <li>for up to three events.</li> <li>- Understand the terms mutually exclusive and exhaustive.</li> <li>- Use the addition law <math>P(A \text{ or } B) = P(A) + P(B)</math> for two mutually exclusive events.</li> <li>- Understand what it means for two events to be independent</li> <li>- Use the multiplication laws for independent events.</li> <li>- Understand what it means for two events to be conditional.</li> <li>- Calculate conditional probability using a tree diagram, two-way table or venn diagram.</li> <li>- Use the formula for conditional probability.</li> <li>- Know that for independent events A and B, <math>P(A) = P(A B)</math></li> </ul>			
<b>Just Higher</b>	<ul style="list-style-type: none"> <li>- Use the general addition law for events that are not mutually exclusive.</li> </ul>			
<b>Index numbers</b>		<b>How well do you understand this topic? RAG</b>		
		<b>Red</b>	<b>Amber</b>	<b>Green</b>
<b>Foundation and higher</b>	<ul style="list-style-type: none"> <li>- Calculate index numbers</li> <li>- Interpret index numbers, including retail price index (RPI) and consumer price index (CPI).</li> <li>- Interpret GDP values.</li> <li>- Calculator rates of change over time, include crude birth and death rates</li> </ul>			
<b>Just Higher</b>	<ul style="list-style-type: none"> <li>- Calculate standardised birth and death rates.</li> <li>- Calculate and interpret weighted index numbers.</li> <li>- Calculate chain base index numbers.</li> </ul>			

Probability distribution		How well do you understand this topic? RAG		
		Red	Amber	Green
Foundation and higher	N/A			
Just Higher	<ul style="list-style-type: none"> <li>- Know the conditions for a binomial distribution to be a suitable model.</li> <li>- Understand the notation <math>B(n,p)</math>.</li> <li>- Calculate probabilities using a binomial distribution.</li> <li>- Know that the mean of a binomial distribution is <math>np</math>.</li> <li>- Know the conditions for a normal distribution to be a suitable model.</li> <li>- Understand the notation <math>N(\mu,\sigma^2)</math>.</li> <li>- Know the shape of a normal distribution curve and how this occurs.</li> <li>- Know that 68% of data lies within one standard deviation of the mean, 95% of data lies within two standard deviations of the mean and 99.8% of the data lies within three standard deviations of the mean.</li> <li>- Draw normal distribution curves, including two curves on the same graph.</li> <li>- Use standardised scores to compare two samples of data.</li> <li>- Understand the process of quality assurance and why it is necessary in the real world.</li> <li>- Calculator warning limits and action limits for means.</li> <li>- Drawn warning limits and action limits on a control chart for means, medians and ranges.</li> <li>- Understand how warning limits and action limits are used in the manufacturing process.</li> </ul>
